

| |
|---|
| Computer: Mac (school) |
| Storage: 79.36 Gigabytes |
| Frequency change: 5% during Mondays – Fridays |
| Type of backup: Every Friday afternoon |

For school, I think the smartest thing to do would be to save my work to an external hard drive as well as saving it to the cloud servers. Although I am not 100% confident on cloud servers, and fear if they ever got hacked all my work could be stolen. Though I would still use them.

|--|
| Computer: Windows (Home) |
| Storage: 1 Terabyte |
| Frequency change: 10-15% During the week |
| Type of backup: Everyone Monday |

For home, I think the most ideal way to store my work would be via cloud computing. In the case of a fire or any disaster in which my house would no longer be livable, I find comfort knowing my work would be saved on a cloud server and held by a responsible company.
